DETAILED ACTION

Receipt and entry of the amendment dated 1/11/2006 is acknowledged. After entry of the amendment, claims 66-114 are pending and under examination.

Claim Rejections - 35 USC § 112

The following is a quotation of the first paragraph of 35 U.S.C. 112:

The specification shall contain a written description of the invention, and of the manner and process of making and using it, in such full, clear, concise, and exact terms as to enable any person skilled in the art to which it pertains, or with which it is most nearly connected, to make and use the same and shall set forth the best mode contemplated by the inventor of carrying out his invention.

Claims 66-114 are rejected under 35 U.S.C. 112, first paragraph, as failing to comply with the written description requirement. The claim(s) contains subject matter which was not described in the specification in such a way as to reasonably convey to one skilled in the relevant art that the inventor(s), at the time the application was filed, had possession of the claimed invention. **This is a new rejection necessitated by applicants' amendment of the claims in the response filed 1/11/2006. This is a New Matter rejection.**

Amended claims 66, 69, 82 and 98 (from which all other claims depend) recite a "target fusion protein comprising segments P1, Cub-X, and RM in an order wherein Cub-X is closer to the N-terminus of the target fusion protein than RM and P1." Applicants' response does not indicate where in the specification support for the amendment may be found. A search of the specification does not reveal any disclosure of the claimed configuration of the target fusion protein. In fact, applicants' disclosure is directed solely to a target fusion protein with a configuration of, from N- to C-terminus, "P1-CubX-RM". See the target fusion proteins of Figures 1, 2, and 8 and the Examples. There is nothing in the specification that would lead one

Art Unit: 1633

of skill in the art to consider the target fusion protein disclosed by applicants' invention to have a configuration other than P1-CubX-RM. Furthermore, if a target protein having a configuration as instantly claimed (i.e. CubX-RM-P1 or CubX-P1-RM) were to be used in applicants' Examples and Figures it would be inoperative because the CubX domain would be on the opposite side of the plasma membrane relative to the Nub domain of the claimed candidate fusion protein. Thus, the Cub and Nub domains could never come into contact and mediate cleavage of RM from the target fusion protein (e.g. as depicted in Fig. 1). For these reasons, the claims contain impermissible new matter.

Conclusion

No claims are allowed. Any rejection not repeated in this Office Action is withdrawn.

Applicant's amendment necessitated the new ground(s) of rejection presented in this Office action. Accordingly, **THIS ACTION IS MADE FINAL**. See MPEP § 706.07(a). Applicant is reminded of the extension of time policy as set forth in 37 CFR 1.136(a).

A shortened statutory period for reply to this final action is set to expire **THREE MONTHS** from the mailing date of this action. In the event a first reply is filed within **TWO MONTHS** of the mailing date of this final action and the advisory action is not mailed until after the end of the **THREE-MONTH** shortened statutory period, then the shortened statutory period will expire on the date the advisory action is mailed, and any extension fee pursuant to 37 CFR 1.136(a) will be calculated from the mailing date of the advisory action. In no event,

Art Unit: 1633

however, will the statutory period for reply expire later than SIX MONTHS from the date of this final action.
